HAIR REMOVAL

The EXCELIGHT® uses Dynamic Reflex Technology for comfortable, safe and effectiveness hair removal treatments.

When having IPL hair removal, the light emitted by the device is absorbed by melanin within the hair, which is then converted into heat energy and damages the hair follicle. Treatment sensation varies but you can feel what is described as the 'hot flick' of an elastic band during treatment. However, thanks to Dynamic Reflex Technology, most clients describe the discomfort as moderate and tolerable. The number of sessions required varies from client to client and is dependent on many factors. Results can be seen after just a few treatments. However, a minimum of 6 and up to 12 treatments are recommended to deliver the best results. Most people are suitable for treatment. We recommend a consultation with us to ascertain if the treatment will be successful for you. Grey/white hair has no melanin so is not recommended for treatment.

SKIN REJUVINATION

A solution for all the visible signs of ageing caused by sun damage, including brown spots (pigmentation), redness (thread veins), uneven skin texture, lines and wrinkles and acne.

Light assisted skin rejuvenation works through pulses of light that are emitted to target discolouration (brown and red lesions) to create a more youthful, even complexion. In addition, the light energy stimulates the fibroblast cells, leading to increased production of new collagen and elastin. This improves the texture of the skin, evening out lumps and bumps whilst reducing the appearance of lines and wrinkles. Treatment can be mildly uncomfortable, but no anaesthesia is required. Most people describe the discomfort as moderate and acceptable, not unlike a quick pinprick. You will also experience a warm sensation. Results can be seen after just a few treatments. However, a minimum of 3 and up to 6 sessions, are recommended depending on your skin concerns. Treatments are carried out every 4 to 6 weeks. Following your course of treatments, top-up sessions are performed as required, usually once or twice a year.

Enhance your natural filter...

illumiFacial™

Everyone is using filters to achieve the appearance of airbrushed skin. With illumiFacial® you will no longer need to apply a filter. Together we can rejuvenate, enhance, and illuminate your skin's natural beauty.

The illumiFacial® is a 4-stage treatment

Step 1: Cleanse

Step 2: Tri-Fruit Acid Peel

Step 3: Lynton IPL

Step 4. Hydrate and protect with a trio of serums

illumiFacial® is a very quick, comfortable treatment which is designed to provide you with 'optimum skin health'. Some people will feel a slight tingling sensation when the fruit peel is first applied, but it very quickly subsides. The IPL aspect of this treatment can sometimes be mildly uncomfortable - most people describe the discomfort as feeling 'warm' and 'like a quick pinprick', all of which is very tolerable.

You may experience a superficial tingling feeling on the skin and you may see a darkening of pigmented spots before they flake away. This means the treatment has worked, providing you with a more even, flawless and brighter skin tone. Following your treatment, you will notice clearer, healthier skin and you will also experience an ongoing improvement to the firmness and plumpness of your skin. This is because new collagen is stimulated deep within the skin tissue in the months after treatment.

PRE TREATMENT ADVICE

- A consultation and test patch is required for every client. The area to be treated should be free from make-up, perfume, deodorant and body or face creams. Be careful when using spray deodorant prior to treatment.
- Avoid waxing, plucking, hair removal creams and bleaching for, one month prior to hair removal treatments. Hair should be shaved prior to treatment and be no longer than 1mm in length.
- There should be no active or fake tan in the area to be treated. Use of sunbeds or prolonged exposure to sunlight is not allowed in the month prior to treatment and an SPF 30 must be used on the area between treatments. Suntans must be left to fade completely before treatment can start. Fake tans must also be fully faded before treatment can commence. We reserve the right to charge for any appointment booked but abandoned due to active suntan or fake tan.
- A medical history is taken at consultation, but we rely on you to inform us of any changes to this. We need to know of any medication you are taking including those bought from a chemist or herbalist.
- Make sure that you arrive in good time for your appointment; this will allow us to pre-cool the skin if this should be required.
